

## JS (Part 2)

## **Practice Questions**

Qs1. Create a number variable num with some value.

Now, print "good" if the number is divisible by 10 and print "bad" if it is not.

Qs5. Write a program to find the largest of 3 numbers.

[Use the number as the case value in switch]

Qs4. A string is a *golden string* if it starts with the character 'A' or 'a' and has a total length greater than 5.

Then return back the following statement to the user as an alert (by substituting neir name & age):

name is age years old.

Use template Literals to print this sentence]

Qs3. Write a switch statement to print the months in a quarter.

Months in Quarter 1: January, February, March
Months in Quarter 2: April, May, June
Months in Quarter 3: July, August, September

[Use the number as the case value in switch]

Qs4. A string is a *golden string* if it starts with the character 'A' or 'a' and has a total length greater than 5.

Qs6 (Bonus). Write a program to check if 2 numbers have the same last digit. Eg: 32 and 47852 have the same last digit i.e. 2
